

## **GEAPUR FLS**

<b>Chemical Nature:</b>	water-based polyurethane and additives
<b>Active Substance:</b>	approx. 23%
<b>pH:</b>	approx. 8,0
<b>Ionic Charge:</b>	anionic
<b>Aspect:</b>	white liquid
<b>Utilization:</b>	matte top coat

### **PROPERTIES**

---

GEAPUR FLS is a matte polyurethane with a pleasant feel developed for use in top coats. It forms a soft, resistant film with a high matting level. It is recommended for various types of articles such as furniture upholstery leather and leather for leathersgoods and footwear. Thanks to its composition, it offers top results in dry and wet friction tests as well as high resistance to ageing and light. Depending on the desired matting level, GEAPUR FLS may be used either neat or combined with other shiny PUs in the GEAPUR product range. In order to increase physical resistances, it is recommended to use crosslinking agent GEAFIX 7. If applied with spraying gun the product should be diluted with water at the rate of 1:1.
