

GEAGROUND K 77

| | |
|-------------------------|---|
| Chemical Nature: | wax, oil and synthetic polymer emulsion |
| Solids Content: | approx. 38% |
| pH: | approx. 8,5 |
| Ionic Charge: | amphoteric |
| Aspect: | white viscous solution |
| Utilization: | finish pre-bottom |

PROPERTIES

GEAGROUN K 77 is a composition of great success whenever there is the problem of burned grain and it is desired to favour the uniformness of the finish absorption. Due to its softness characteristics, its use is particularly indicated for finish pre-bottom and bottom layers, polished finishes and finishes treated with hot plate. Due to its amphoteric characteristics, GEAGROUND K 77 can be used in cationic as well as in anionic finishes without precipitation problems of any kind.
